

SPINNER DOLPHIN

Clear Casting
Biobased
Epoxy System

SPINNER DOLPHIN

The playful Spinner Dolphin makes itself known with a splash. Skilled acrobats, the small dolphins regularly leap out of the water and perform complicated aerial maneuvers. They can spin multiple times in one leap, which can be nearly 10 feet high. Spinner dolphins live in large pods from a few dozen to a thousand or more in tropical and subtropical zones around the world. They are the most abundant dolphin species in the Indian Ocean.

SPINNER DOLPHIN

Spinner Dolphin is an epoxy system specially formulated for **transparent casting applications**. Suitable for ceramic, metal, wood and glass containers. It has optimal mechanical characteristics and low reactivity. It can be used with a wide range of **pigments**.

Applications

Casting

Jewelry

Coatings

Key features

Wide working temp. range

Materials and processing times should be in a range of 2-28°C.

Ideal system for:

Transparent applications

Biocontent

*pending certification

Technologies
bonded by **respect**
& driven by **values**

Lower your carbon footprint.

Repair solutions, tips, services and kits.

End-of-life solutions for the composite industry.

Upcycling materials for new performing composites.

Respect for all stakeholders in the composites industry, the environment, humans & the planet as a whole.
